**DETAILED ACTION**

1. The preliminary amendment filed 9/26/06 has been noted.

***Specification***

2. The abstract of the disclosure is objected to because the abstract is not on a separate sheet. Correction is required. See MPEP § 608.01(b).

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 5-9, 42-46, 53, and 75-80-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Gutman et al, US Patent No. 6,206,293.

Gutman discloses a card having conductor 204 corresponding to the magnetic reading head 103 of the magnetic reading mechanism 102 of the magnetic card reader 100; the conductor 204 is electrically coupled to at least one driver circuit 206 for driving electrical signals through the conductor 204; a controller 208 is coupled to the driver circuit 206 for controlling the operation of the driver circuit 206; the controller 208 causes the driver circuit 204 in accordance with the data signal; the electrically drive conductor 204 emits an alternating polarity magnetic field about the conductor 204 with the data signal; the alternating polarity of the magnetic field about the conductor 204 comprises magnetic flux transitions; these magnetic flux transitions can be picked up by the magnetic reading head 103 and detected by the magnetic card reader 100 to indicate bits of information corresponding to the data signal provided by the controller 208;

Gutman's system is in accordance with the American National Standards Institute (ANSI) and international standard ISO/IEC; Gutman further discloses that first, the driver circuit 206 can forward drive a current through the conductor 204 to emit a magnetic field with a first polarity. Second, the driver circuit 206 can drive the conductor 204 with a reverse current to emit a magnetic field of a second polarity. (See col. 4, lines 1-7 and 25-30; col. 6, lines 1-14 and 30-33).

5. **Examiner's note:** Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.

#### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patent No. 5,650,606 and 6,34,848.
